UVitec Introduces Offset UV Ink that Bonds Well to Variety of Different Substrates

*—Unique Formulation Improves Press Stability and Color Consistency To Make 47 Series
Ink Ideal for Combination Presses —*

Lodi, NJ (December 2002) — UVitec Printing Ink, Inc. introduces the 47 Series of UV offset inks that has been developed using a unique formulation process that gives the inks strong bonding characteristics, improved press stability, and reliable color consistency. Ideal for use on combination presses, the 47 Series is specifically designed to print well on a variety of rotary screen and UV flexo inks, therefore providing excellent interlayer adhesion and wetting properties.

UVitec's 47 Series is formulated with the perfect blend of ingredients that allows the UV ink to maintain an ideal ink/water balance. The result is a high performance ink with good throughcure for improved cure speed, roller stability, and high rub resistance. The 47 Series ink prints well on paper and has strong adhesion to virtually all plastic, foil, and film substrates. Featuring excellent tack and body characteristics, the 47 Series is formulated to achieve sharp, clean dots, making the ink extremely well suited for four-color process applications.

The instant cure response of the 47 Series eliminates ink set-off in the roll. As is the case with all UV inks, the 47 Series is essentially VOC free, making it environmentally friendly. The 47 Series comes in a variety of Pantone® and process colors, as well as metallic colors.

About UVitec

UVitec Printing Ink, Inc. is a leading manufacturer of high quality UV curable inks and coatings. UVitec manufactures standard inks and a number of specialty products used for printing and coating cosmetic folding cartons, soda bottle labels, pharmaceutical labels, consumer product labels, business forms, lottery tickets, catalogs, and baseball cards. Founded in 1980, UVitec is recognized for its experience, service, and quality products.
